Abstracts

The global PAC/PAM Coagulant Flocculant Dosing Device market size is predicted to grow from US$ 1426 million in 2025 to US$ 1971 million in 2032; it is expected to grow at a CAGR of 4.8% from 2026 to 2032.

In 2024, global production of PAC/PAM coagulant flocculant dosing devices reached 229,000 units, with an average selling price of US$6,020 per unit. The PAC/PAM dosing system is an integrated system that precisely prepares and adds chemicals such as polyaluminum chloride (PAC) and polyacrylamide (PAM) to destabilize and aggregate suspended particles and colloidal substances in water that are difficult to settle. This facilitates subsequent sedimentation or filtration separation, making it a key step in water purification. It is applied in municipal water supply and drainage, industrial wastewater (papermaking, textile printing and dyeing, chemical, food and beverage, steel mining/coal preparation/tailings return water), sludge dewatering pretreatment, circulating cooling, and greywater reuse. Upstream components include PAC/PAM chemicals and additives, metering pumps and motors, sensors and valves, and PLC/HMI and communication modules. Downstream customers include municipal water companies and various industrial sectors requiring water treatment, such as petroleum, chemical, papermaking, food, and mining. The industry's gross profit margin is approximately 15-30%.
