Paint and Varnish Stripper is a mixture liquid consisting of chlorinated hydrocarbons, ketones, esters, alcohols, benzene and other solvents. It utilizes the solvent's osmotic swelling characteristics to the coverings, with which the paint can be directly peeling or make the coating peeling easier.

Market drivers:

Environmental policy promotion: Global restrictions on volatile organic compounds (VOCs) have driven the demand for low-VOC or zero-VOC strippers.

Increasing demand for industrial maintenance: The demand for coating maintenance and renovation in industrial facilities has increased, and the market demand for strippers has increased accordingly.

Technological innovation: The development of new strippers will improve stripping efficiency and reduce environmental pollution.

Future development trends:

Development of environmentally friendly products: Strippers will develop in a more environmentally friendly and low-toxic direction, in line with global environmental trends.

Multifunctionality: Products will develop in a multifunctional direction, such as having anti-rust, anti-corrosion and other functions at the same time, to increase product added value.

Intensified market competition: With the growth of market demand, more companies will be attracted to enter, market competition will intensify, and product innovation will be promoted.
