Thermoplastic polyurethane elastomer rubber, this material has a characteristic, that is, the elasticity is particularly good, the fission elongation rate is greater than 300%, and it is a polymer material with very good recovery after external force is removed.

Therefore, when the protective film of the paint surface made of TPU is subjected to external force, rupture occurs, and the external force is withdrawn, the TPU molecule will undergo fission and stretch. Of course, high temperature can promote or accelerate the occurrence of this effect to a certain extent, so as to achieve automatic repair effect.
