Palladium sputtering target shares properties with its source material. Palladium is a member of the platinum group of metals. It is a lustrous silver-white metal. It has a face-centered cubic crystalline structure, at ordinary temperatures, it is strongly resistant to corrosion in air and to the action of acids. It is attacked by hot acids, and it dissolves in aqua regia. It forms many compounds and several complex salts. Palladium has good corrosion resistance but is soluble in oxidizing acids and fused alkalis. It readily absorbs hydrogen gas (up to 900 times its own volume), but its main use is as a catalyst for hydrogenation.
