Palladium is a precious metal that has many industrial applications. Palladium sulfate is a chemical compound in which palladium ions are bound to sulfate ions. Palladium sulfate can be used as an optical sensor for the detection of hydrogen peroxide and as an oxidation catalyst for organic reactions. Palladium sulfate is also used in electroplating, as it can reduce the amount of current needed to plate metal onto a surface. In addition, palladium sulfate can be found in some toothpastes and mouthwashes, where it acts as a chelating ligand to bind with fatty acids and prevent them from being released into the mouth.
