A palladium tester is an instrument used to detect and analyze the palladium content in substances. Palladium is a rare metal with important industrial and commercial value. Palladium testers can accurately measure the amount of palladium in a sample by using specific chemical reagents and detection techniques. Detection methods commonly used by palladium testers include atomic absorption spectroscopy (AAS), inductively coupled plasma optical emission spectroscopy (ICP-OES), and inductively coupled plasma mass spectrometry (ICP-MS). These methods can determine the palladium content by measuring the absorption, emission, or mass spectrometry signals of palladium atoms or ions in the sample. Palladium testers are widely used in metal processing, chemical industry, electronics, medicine and other industries. It can be used in quality control, product inspection, environmental monitoring and other fields to ensure that product quality meets standard requirements. It can also be used to research and develop new materials, new processes, etc. The use of palladium testers
