Pallet flow rack or gravity flow racking, is a type of storage system that uses gravity to move pallets from the loading dock to the picking aisle. Pallet flow racks are often used in warehouses and distribution centers where inventory turnover is high, and storage density is a priority.

Unlike other storage methods, pallet flow allows businesses to store pallets deep within the rack, making full use of the height of the facility. Additionally, pallet flow racks can be designed to store all pallets in a first-in, first-out (FIFO) orientation, ensuring consistent inventory rotation. As a result, pallet flow racking is an efficient and effective way to increase storage density and improve picking productivity.

Pallet flow racking uses inclined flow lanes to store products on pallets or cartons. These pallet flow lanes are fed from the rear of the rack, allowing you to store merchandise multiple pallets deep. When a product is picked from the front of each pallet flow lane, empty pallets are moved to the rear to maintain product flow.

This type of storage system is very versatile and can be used in applications where high-density storage and fast order picking are important. Pallet flow racking can also be configured to work with various types of forklifts.

The global market for Pallet Flow Rack Storage Systems is estimated to increase from US\$ million in 2021 to reach US\$ million by 2028, exhibiting a CAGR of % during 2022-2028. Keeping in mind the uncertainties of COVID-19 and Russia-Ukraine War, we are continuously tracking and evaluating the direct as well as the indirect influence

of the pandemic on different end use sectors. These insights are included in the report as a major market contributor.
