A palletizer or palletiser is a machine which provides automatic means for stacking cases of goods or products onto a pallet.

Manually placing boxes on pallets can be time consuming and expensive; it can also put unusual stress on workers. The first mechanized palletizer was designed, built, and installed in 1948 by a company formerly known as Lamson Corp. There are specific types of palletizers including the row-forming which were introduced in the early 1950s. In row-forming palletizing applications loads are arranged on a row forming area and then moved onto a different area where layer forming takes place. This process repeats until a full layer of goods and products are configured to be placed on a pallet.

Global Palletizer key players include FUNAC, Fuji Yusoki, ABB, KUKA, YASKAWA, etc. Global top five manufacturers hold a share over 40%.
