A palm kernel oil extraction machine is a type of equipment designed to extract oil from the kernels of palm fruits. These kernels are the small, seed-like parts found inside the palm fruit, which is the source of palm oil. The extraction of oil from palm kernels is a separate process from the extraction of palm oil from the mesocarp of the fruit. Palm kernel oil extraction machines can vary in size and complexity, ranging from small-scale units suitable for local or artisanal oil production to large-scale industrial machines used in commercial oil refineries. The machines are designed to be efficient, reducing waste and labor while producing high-quality oil that can be used for cooking, frying, and in the production of various food products and biodiesel. Palm kernel oil is also used in the manufacturing of cosmetics, soaps, and lubricants.

The global Palm Kernel Oil Extraction Machine market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
