A pan head is a metal or plastic apparatus placed on top of a pan head tripod head that increases stability and provides faster, more accurate rotation of the camera for the photographer. A pan head, also called pan and tilt head, allows independent rotation of the camera about two or three perpendicular axes, which normally do not intersect. Typical pan heads have lockable levers for each axis, a scale marked in degrees at least for the vertical axis, and one or more spirit levels. This construction is significantly more complicated than that of a ball head.

The global Pan Head Tripod Head market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
