A panel cabinet is a protective enclosure used in industrial control panels, housing equipment such as electromagnetic contactors, and circuit breakers. These cabinets safeguard the electrical circuits and devices inside from environmental elements like water, dust, and sunlight, and also prevent electric shock by restricting access to hazardous areas.

Panel cabinets are widely used in various settings where industrial control equipment is needed. They are commonly found in commercial facilities, typically installed in less accessible areas to manage power supply and control. Signal control cabinets under electric poles, as well as cabinets in schools and station buildings, are also examples. Despite their crucial role, they are often placed discreetly out of plain sight.
