The global Paper Stacker market size is predicted to grow from US\$ 308 million in 2025 to US\$ 508 million in 2032; it is expected to grow at a CAGR of 7.5% from 2026 to 2032.

In 2025, global paper stacker production reached approximately 48600 units. Paper collectors are auxiliary devices used for paper collection, alignment, and conveying, and are widely applied in the printing, packaging, papermaking, and office automation industries. Their primary function is to automatically stack, arrange, and collect finished or semi-finished paper products after processes such as printing, cutting, folding, or binding, thereby improving production line continuity and reducing manual handling workload. Depending on the application scenario, paper collectors can be integrated with printing presses, collating machines, folding machines, die-cutting machines, and packaging equipment to achieve stable paper collection while preventing misalignment, curling, or scattering during high-speed operations. With the continuous advancement of automation in the printing and packaging industries, modern paper collectors are increasingly developing toward high-speed operation, intelligent control, and modular design. Some advanced systems are equipped with automatic counting, pneumatic paper alignment, tension control, and intelligent detection functions, enabling them to handle paper materials of different sizes, thicknesses, and textures. In commercial printing, label packaging, e-commerce packaging, and digital printing sectors, the growing demand for efficient paper handling systems is further driving the development and technological upgrading of the paper collector market.

The paper collector market has maintained steady growth in recent years, driven by the automation upgrade of the global printing and packaging industry, the increasing demand for digital printing, and the widespread adoption of high-speed production lines. As an important auxiliary device in post-press processing and paper handling operations, paper collectors are widely used in commercial printing, label printing,

corrugated packaging, carton processing, and office automation fields. These systems effectively improve paper collection efficiency, reduce labor costs, and ensure production continuity. With the packaging industry moving toward higher efficiency, shorter production cycles, and customized manufacturing, the demand for automated post-press equipment has continued to rise, further expanding the paper collector market. From a technological perspective, modern paper collectors are increasingly evolving toward high-speed operation, intelligent control, and flexible processing capabilities. More equipment is now equipped with PLC control systems, servo drives, photoelectric detection, and automatic lifting structures to meet the high-speed sorting and stacking requirements of paper materials with different sizes, thicknesses, and textures. Some high-end models also feature automatic counting, misalignment correction, intelligent stacking, and data monitoring functions, allowing coordinated operation with printing presses, die-cutting machines, laminating machines, and collating systems to improve the automation level of entire production lines. In addition, the growth of digital printing, variable data printing, and e-commerce packaging has increased demand for small-batch and multi-batch production, further driving the need for flexible paper collection equipment.
