The global Paper Surface Sizing Agents market size is predicted to grow from US$ million in 2025 to US$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Paper surface sizing agents are chemical compounds applied to the surface of paper during the manufacturing process to improve its properties and performance. These agents are designed to enhance the paper's surface strength, reduce its absorbency, and provide resistance to penetration by liquids, such as water or ink. Common types of surface sizing agents include starch, synthetic polymers, and combinations of chemicals tailored to specific paper grades and applications. By controlling the surface characteristics of the paper, sizing agents contribute to improved printability, reduced feathering of ink, and increased resistance to water-based damage. The selection of the appropriate surface sizing agent depends on the desired properties of the final paper product and its intended end-use, such as in printing, packaging, or other applications.
