The paper thickness tester is a precision measuring device used to measure the thickness (?m/mm) of materials such as paper, cardboard, and film to ensure that the product meets industry standards (such as ISO 534, TAPPI T411). Its core principle uses contact measurement to perform non-destructive testing of samples through high-precision sensors and a constant pressure system (usually 50±1 kPa), with a resolution of up to 0.1?m. It is widely used in papermaking, packaging, printing and quality inspection agencies, supports single-point/multi-point measurement, and has functions such as data statistics and print output. It is a key tool for production process control and quality management.
