The term 'aramid fibre' refers to a manufactured fibre in which the fibre-forming substance is a long-chain synthetic polyamide with at least 85% of the amide linkages attached directly to two aromatic rings. 'para-Aramid fibres' are those in which the amide linkages are in the para (1,4) positions on the aromatic rings. These fibres are many times stronger than steel and have been crucial to industries such as ballistics protection and cut-resistant protective materials, enabling what were previously steel or other metal components to be replaced with fabric systems.

The global Para-Aramid Fiber Ballistic Material market size is projected to grow from US\$ 739 million in 2024 to US\$ 1105 million in 2030; it is expected to grow at a CAGR of 7.0% from 2024 to 2030.
