The global Parallel Drive Actuator market size is predicted to grow from US\$ 87 million in 2025 to US\$ 120 million in 2031; it is expected to grow at a CAGR of 5.5% from 2025 to 2031.

Parallel Drive Actuator's motor is directly parallel to the drive spindle. Typically, these types of actuators are spur or spiral gear with more gear ratio options. Parallel drive actuators allow for a broader range of loads and speeds. However, parallel drive actuators with spur gear can operate louder than spiral gear and worm gear driven actuators.

The Parallel Drive Actuator, as an advanced actuator, has gained significant market traction across various industrial sectors. Its unique design enables efficient linear motion control within tight spaces, making it widely applicable in areas such as automated production, mechanical manufacturing, and aerospace. The market size has been progressively expanding with steady sales growth, particularly excelling in applications that require precise positioning and repeatability. Looking ahead, the Parallel Drive Actuator is poised for further development, incorporating intelligent control and higher load capabilities to extend its range of applications and meet the evolving industrial demands.
