According to our LPI (LP Information) latest study, the global Parallel Seam Sealers market size was valued at US\$ 35 million in 2023. With growing demand in downstream market, the Parallel Seam Sealers is forecast to a readjusted size of US\$ 53 million by 2030 with a CAGR of 5.9% during review period.

The research report highlights the growth potential of the global Parallel Seam Sealers market. Parallel Seam Sealers are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Parallel Seam Sealers. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Parallel Seam Sealers market.

Parallel seam sealer, also known as spot welding machine, seam welding machine, and spot welding integrated machine, is mainly composed of two parts: the upper computer (PC) and the lower computer (single-chip microcomputer). Divided into manual parallel seam sealer, semi-automatic parallel seam sealer, fully automatic parallel seam sealer, suitable for microelectronic devices, optoelectronic devices, crystal/SAW and other packaging.

Principle of parallel sealing welding:

Pressure is applied to the base and lid, welded by electric current. First put the cover on the base, install the roller electrode above the cover, and pass electricity to the cover

and the base through the roller electrode. The contact resistance between the electrode and the cover is very high, thereby generating Joule heat, which is used for welding. The electrode is energized while rolling from the edge of the cover. As the current flows, a certain area will be welded. When the welded part is continuously welded without gaps, it means that the effect of airtight packaging has been achieved. Most of the electronic components in the base are quartz crystals, microelectronic sensors and optoelectronics. Parallel seal welding and resistance welding also use pressure and electricity to weld the base to the metal cover.

Global key players of parallel seam sealers include Nippon Avionics, AMADA WELD TECH, The 2ND Research Institute of China Electronics Technology, Polaris Electronics and Pyramid Engineering Services. The top five players hold a share over 65%. North America is the largest producer, has a share about 32%, followed by China, with share 30%.
