Parametric is a term used to define a dimension's ability to modify the shape of model geometry when the dimension value is altered. Parametric design software has the capability to create designs that need to be modified on a regular basis. Advanced designing technologies are changing the world of product design. Parametric design software aids organizations to choose the right product lifecycle management (PLM) components in order to meet their business objectives. Computer technology has provided various technologies and tools to architects and designers which can be used to simulate and analyze the complications observed in urban organizational patterns and structural building shapes. Before the introduction of parametric designing and modeling, changing the shape and size of any object was not an easy task for engineers.
