The global Parametric Test Probe Cards market size is predicted to grow from US$ 127 million in 2025 to US$ 181 million in 2032; it is expected to grow at a CAGR of 5.3% from 2026 to 2032.

A Parametric Test Probe Card is a specialized device used in semiconductor testing to measure the electrical properties of a semiconductor wafer. Unlike traditional probe cards used for functional testing, parametric test probe cards are designed for parametric testing, which focuses on verifying and characterizing the electrical parameters of individual semiconductor devices, such as transistors, diodes, and capacitors, rather than entire integrated circuits.

Parametric testing involves evaluating the performance of individual components within a semiconductor device. Probe cards enable this by allowing precise measurements of various electrical parameters, such as voltage, current, and resistance, across different points on the integrated circuit.

United States market for Parametric Test Probe Cards is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Parametric Test Probe Cards is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
