The global Parking Tolling System market size is predicted to grow from US\$ 302 million in 2025 to US\$ 552 million in 2032; it is expected to grow at a CAGR of 8.5% from 2026 to 2032.

In 2025, global Parking Tolling System approximately 889 k units, with an average global market price of around US\$ 347 per unit. Gross margin is about 48%. The cost is 180 usd. The Production is about 1500 k units. A Parking Tolling System is a vehicle access and payment management system used in parking lots, on-street parking spaces, commercial complexes, airports, hospitals, business parks, and residential communities. It typically integrates license plate recognition, barrier gate control, billing rules, payment terminals, mobile payment, e-receipts, and back-office management platforms to support vehicle identification, parking duration calculation, fee settlement, entry and exit control, and operational data management. With the development of smart parking and digital urban mobility, parking tolling systems are increasingly moving toward unmanned operation, cloud-based management, contactless payment, and connected multi-site operation.

Parking Tolling Systems are expected to evolve toward unmanned operation, contactless payment, cloud-based management, and intelligent operation. Traditional manual payment and paper-ticket-based systems will gradually decline, while license plate recognition, ETC/RFID, QR code payment, mobile payment, and e-invoicing will become standard features. Future systems will be increasingly connected with smart parking platforms, commercial property management systems, and urban traffic management platforms, enabling multi-site operation, dynamic pricing, parking reservation, membership management, and operational data analytics. With the growth of electric vehicles, parking tolling systems will also be further integrated with EV

charging, parking guidance, and energy management systems, forming a combined 'parking + charging + payment + operation' solution.
