A Partial Discharge (PD) Inspection Instrument is a diagnostic tool used to detect, measure, and analyze partial discharges—localized electrical discharges that do not completely bridge the insulation between conductors—in high-voltage electrical equipment. These discharges are early indicators of insulation degradation, which can lead to equipment failure if left unaddressed. PD inspection instruments are essential for condition-based maintenance of assets such as transformers, switchgear, cables, and generators. They help utilities and industrial operators improve reliability, extend equipment lifespan, and reduce unexpected downtime by identifying potential faults before they escalate.
