Chipboard – also sometimes referred to as Particle Board or Low Density Fibreboard – is made by mixing small wood particles with epoxy resin, which are pressed together under intense heat and pressure to produce a rigid board, typically with a smooth surface. Chipboard is available in a variety of densities to suit different needs and uses, including low, medium and high-density varieties. The lower densities are fairly soft and pliable, while the higher-density chipboards are more rigid and can be used for more heavy-duty applications.

The particleboard panels market is a segment of the global wood-based panel industry that revolves around the production and distribution of particleboard panels. Particleboard panels are engineered wood products made from wood particles, such as sawdust and wood shavings, combined with adhesive resins. These panels are widely used in furniture manufacturing, cabinetry, construction, and interior design due to their

cost-effectiveness and versatility. The market is influenced by factors like construction and housing trends, environmental regulations, and consumer demand for sustainable and affordable building materials. As sustainability becomes an increasingly important consideration, manufacturers are also exploring eco-friendly production methods and sourcing practices to meet evolving market demands. The market is competitive, with numerous global and regional players, and it continues to evolve in response to changing industry dynamics and consumer preferences.
