Parting agents facilitate the removal of old paint, coatings, resins, and adhesives from metal, glass, and plastic surfaces. Traditionally, methylene chloride-based agents were common, but there has been a shift towards environmentally friendly, non-chlorinated alternatives.

Parting Agents are essential in preventing uneven painting, peeling, and cracking when applying new coatings. Choices between water-based, solvent-based, and methylene chloride-based agents depend on material compatibility, the extent of removal, and the process involved. Given its harmful effects on health and the environment, methylene chloride requires careful handling.
