A parts diverting system is an automated material diversion and waste removal device installed at the end of a conveyor line or sorting machine. It typically uses a pneumatic actuator, flap mechanism, or gravity chute to quickly divert unqualified products, foreign matter, or materials requiring recycling to a designated collection area. It is widely used in food processing, pharmaceuticals, ore grading, solid waste recycling, and logistics sorting. This equipment is crucial to production line continuity and product quality control. The upstream supply relies on stainless steel sheet metal, pneumatic components, sensors, and PLC control systems; the downstream supply primarily serves food and beverage companies, pharmaceutical factories, mining processing companies, waste sorting centers, and e-commerce warehousing and logistics companies.
