The global Passenger Car Antenna market size is predicted to grow from US\$ 1618 million in 2025 to US\$ 1743 million in 2031; it is expected to grow at a CAGR of 1.2% from 2025 to 2031.

Passenger Car Antenna is an electrical component which is designed to be mounted on the vehicle refers to receive and transfer information. Typically an antenna consists of an arrangement of metallic conductors (elements), electrically connected (often through a transmission line) to the receiver or transmitter. An oscillating current of electrons forced through the antenna by a transmitter will create an oscillating magnetic field around the antenna elements, while the charge of the electrons also creates an oscillating electric field along the elements. These time-varying fields radiate away from the antenna into space as a moving transverse electromagnetic field wave. Conversely, during reception, the oscillating electric and magnetic fields of an incoming radio wave exert force on the electrons in the antenna elements, causing them to move back and forth, creating oscillating currents in the antenna.

Europe is the largest Passenger Car Antenna market with about 37% market share. China is follower, accounting for about 23% market share. The key manufacturers are Laird, Harada, Yokowa, Kathrein, Northeast Industries, Hirschmann, ASK Industries, Suzhong, Fiamm, Inzi Controls, Riof, Shenglu etc. Top 3 companies occupied about 56% market share.
