Passenger car service braking system refers to the integrated dynamic braking system installed in passenger cars to decelerate, stop, and stabilize the vehicle during normal driving. It typically includes the brake pedal mechanism, brake boosting or pressure-generation unit, master cylinder and hydraulic lines, wheel-end brake assemblies, and electronic control functions such as ABS and ESC. In technology terms, it spans vacuum-assisted hydraulic braking, electronically assisted hydraulic braking, and electromechanical braking, and serves as a core execution layer for vehicle active safety, chassis control, and ADAS coordination.

The supply chain of passenger car service braking systems starts upstream with cast iron/aluminum housings, steel, friction materials, seals, brake fluid, ECUs, sensors, motors, and power electronics. Downstream demand comes from vehicle manufacturers.

In 2025, global passenger car service braking system production reached approximately 80 million sets, with an average global market price is \$115 per set.
