Passive Cold Cathode Ionization Vacuum Gauge is a vacuum measurement device that operates on the principle of cold-cathode discharge, without the need for an external power source to maintain the discharge state of the cathode. This vacuum gauge relies on the collision between gas molecules in the vacuum chamber and electrons produced by the cold-cathode discharge, leading to ionization. The vacuum pressure inside the chamber is estimated by measuring the ionization current. It is suitable for measurement in a variety of vacuum environments and is widely used due to its no-power-required operation and simplicity.
