Passive optical network (PON) optical splitter is a passive device used in optical fiber communication systems, mainly used to distribute a single optical fiber signal to multiple user ends. It distributes the optical signal from the central office (OLT) to multiple terminal devices (ONU) through optical technology, enabling multiple users to share the same optical fiber resources, thereby improving the transmission efficiency of the network and reducing costs. Optical splitters generally do not require power supply and are widely used in broadband access networks such as fiber to the home (FTTH).
