A patch antenna is a type of radio antenna with a low profile, which can be mounted on a flat surface. It consists of a flat rectangular sheet or 'patch' of metal, mounted over a larger sheet of metal called a ground plane.

The global market growth can be attributed to the growing demand for consumer electronic devices such as smartphones, tablets, and wearables in the region. China is the largest automotive manufacturer in the world; the prospective use of chip antennas for wireless communication in automotive telematics applications such as navigation, vehicle tracking, and others is contributing in the growth of the chip antenna market in the APAC region.
