A patch thermometer is a small, adhesive device that can be worn on the skin to measure body temperature. It is a type of wearable technology that is becoming increasingly popular, as it is more convenient and comfortable to use than traditional thermometers. Patch thermometers work by using a sensor to measure the temperature of the skin. The sensor is then connected to a transmitter, which sends the temperature data to a receiver. The receiver can be a smartphone, tablet, or computer. The data can then be stored and viewed on the receiver or shared with a doctor or other healthcare provider.

In 2025, global Patch Thermometer production reached approximately 15,289 K units, with an average global market price of around US$ 38 per unit.
