A patient-controlled analgesia (PCA) pump is a device that releases medicine for pain that you control with a button. Your healthcare provider presets the dosage so you can't give yourself too much. The patient-controlled analgesia (PCA) pump is a computerized machine that gives you medicine for pain when you press a button. In most cases, PCA pumps supply opioid pain-controlling medicines such as morphine, fentanyl and hydromorphone. The pump is attached to a thin, flexible tube (intravenous or IV line) that is placed in your vein. This medicine is usually delivered only when you press the button (bolus), but a continuous rate may be added by your doctor if needed (basal rate).
