A Payment Terminal, also known as a point-of-sale (POS) terminal or card terminal, is a device used by merchants to process electronic payments from customers. It enables the secure and efficient handling of transactions involving credit cards, debit cards, contactless cards, and other payment methods. Payment terminals play a crucial role in facilitating electronic transactions at retail stores, restaurants, and various other businesses.

The adoption of contactless payments, often facilitated by Near Field Communication (NFC) technology, has been a significant trend. Payment terminals that support contactless transactions have become more prevalent, driven by the convenience and speed they offer to both merchants and consumers.
