The global PB and PC Permalloys market size is predicted to grow from US\$ 210 million in 2025 to US\$ 216 million in 2032; it is expected to grow at a CAGR of 0.4% from 2026 to 2032.

This report mainly focuses on PB and PC permalloys market. Permalloy is a nickel-iron magnetic alloy, a common mixture includes 80% nickel and 20% iron, with others formulations are also available. This report mainly focuses on permalloy with a nickel content in the range of 40-85%, which has a high saturation magnetic flux density and a relatively high magnetic permeability.

Permalloy can be processed into various forms and it is a very widely used soft magnetic alloy. According to the segmentation of applications, permalloys is widely used as Electronic Component and others. The most proportion of permalloys is used in Electronic Component application, and the proportion in 2021 is about 90.85%. Due to the terminal sales price of permalloy is expensive, and the emergence of alternative products, the application field of permalloy is relatively limited. In the recent information-oriented society, a lot of digital devices are used by the evolution of the mobile communication system and the spread of IoT apparatuses. With the continuous development of aeronautical engineering and electronics industry, the downstream application of permalloy will continue to grow steadily.
