The global PBAT Masterbatch market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

PBAT masterbatch is a raw material for biodegradable plastics. It is a granular material made of polybutylene succinate (PBAT) as the main component. PBAT is a biodegradable polyester material with good biodegradability and plasticity. It can be degraded by microorganisms under certain environmental conditions, reducing its impact on the environment. PBAT masterbatch is usually used to produce biodegradable plastic products, such as biodegradable plastic bags, biodegradable packaging materials, etc. It is degradable and environmentally friendly, and is gradually being widely used in the production of plastic products and replacing traditional plastic materials. The production process and formula of PBAT masterbatch can be adjusted according to specific needs to meet the requirements of different biodegradable plastic products.

United States market for PBAT Masterbatch is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for PBAT Masterbatch is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
