The global PC Erlenmeyer Flask market size is predicted to grow from US\$ 2236 million in 2025 to US\$ 3220 million in 2032; it is expected to grow at a CAGR of 5.3% from 2026 to 2032.

PC Erlenmeyer Flask is a conical culture container made mainly of polycarbonate (PC), commonly used for cell culture, microbial culture, and biological reaction experiments. Its appearance is a classic conical design, which facilitates mixing and gas exchange, and is often used in conjunction with a shaker to improve cultivation efficiency. This type of product has the characteristics of high transparency, good mechanical strength, impact resistance, reusability or disposable use. Some products are also equipped with breathable covers or filter membrane covers to meet the needs of sterile cultivation, and are widely used in the fields of biopharmaceuticals, scientific research laboratories, and industrial fermentation. In 2025, global PC Erlenmeyer Flask production reached approximately 253.97 M Units, with an average global market price of around US\$ 9 per unit.

The overall market for PC erlenmeyer flask has maintained stable growth with the development of biomedicine and life science research, with core demand coming from cell culture, vaccine research and development, biologics production, and research and experimental expansion. With the rapid development of the biopharmaceutical industry and the improvement of experimental automation level, the demand for high-quality cultivation consumables continues to increase, driving the application of PC material products in durability and reusable scenarios. At the same time, the trend of disposable consumables is also driving the growth of demand for sterile pre-treatment shaking bottles. From the perspective of competitive landscape, the market is jointly participated by international laboratory consumables brands and local manufacturers, with quality and certification still being the core competitive points in the mid to high end market. In the future, with the increase of investment in biotechnology research and development

and the expansion of biomanufacturing scale, the demand for such products will continue to grow, but it will also face competitive pressure in terms of disposable plastic substitution and cost control.
