In 2024, global PCB Card Edge Connector production reached approximately 676 million units?with an average global market price of around US$ 1.2 per unit, a single-line production capacity of approximately 5.5 million units/year, and a gross profit margin of approximately 25%. PCB Card Edge Connector is an electrical connector designed to interface directly with the edge of a printed circuit board (PCB), where conductive traces are exposed and plated, typically with gold or other conductive materials, to ensure reliable signal and power transmission. The connector contains spring-loaded contacts that press against the plated pads on the board’s edge, creating a secure yet easily detachable electrical connection. This design eliminates the need for additional mating components on the PCB, making it a cost-effective, space-saving, and efficient interconnect solution. PCB card edge connectors are widely used in applications that require modularity, flexibility, and frequent assembly or replacement, such as computer motherboards, graphics and expansion cards, storage devices, telecommunications equipment, industrial automation systems, and consumer electronics.

United States market for PCB Card Edge Connector is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
