PCB encapsulation chemicals are specialized materials used to protect printed circuit boards (PCBs) from environmental factors such as moisture, dust, and chemical exposure. These chemicals, often in the form of resins or coatings, create a protective layer around the PCB components, enhancing durability and reliability. Common types include epoxy, polyurethane, and silicone-based encapsulants, each offering varying degrees of adhesion, flexibility, and thermal resistance. Encapsulation helps extend the lifespan of electronic devices and is crucial in applications where PCBs are exposed to harsh conditions.
