The global PCB Epoxy Resin Conformal Coating market size is predicted to grow from US\$ 60.58 million in 2025 to US\$ 101 million in 2032; it is expected to grow at a CAGR of 7.1% from 2026 to 2032.

PCB epoxy resin conformal coating is a high-protection conformal coating material used in electronic assembly, typically formulated as a two-part epoxy, modified epoxy or UV/heat-curable epoxy system. After curing, it forms a hard, dense and strongly adherent insulating film on PCB surfaces. In 2025, the global PCB epoxy resin conformal coating sales is estimated at 2,887 tons, with an average selling price of approximately 21.45 US\$/kg. The PCB epoxy resin conformal coating value chain includes upstream epoxy resins, modified resins, curing agents, diluents, solvents, flame retardants, UV tracers and functional additives.

Growth in the PCB epoxy resin conformal coating market is mainly driven by the expansion of high-reliability electronics. Automotive electronics, EV control systems, charging infrastructure, industrial automation, energy storage inverters, communication equipment, defense electronics and aerospace electronics are increasingly exposed to humidity, salt spray, chemical contamination, vibration and thermal cycling, which raises requirements for insulation stability and corrosion resistance. While acrylic conformal coatings are sufficient for many consumer and general industrial electronics, epoxy systems offer stronger protection in applications requiring chemical resistance, abrasion resistance and long-term reliability. As PCB assembly density increases, component spacing narrows and outdoor electronics become more common, the cost of electronic failure rises, encouraging customers to select coatings based on reliability grade rather than only material cost.
