Abstracts

The global PCB Loader and Unloader Equipment market size is predicted to grow from US\$ 449 million in 2025 to US\$ 661 million in 2032; it is expected to grow at a CAGR of 5.7% from 2026 to 2032.

In 2025, global sales volume of PCB loader and unloader equipment was approximately 55,000 units, with the mainstream ex-factory average price at around USD 8,350 per unit. The gross margin of major manufacturers in the industry was approximately 25%–40%.

PCB loader and unloader equipment, also known as PCB loading and unloading equipment, is automated material handling equipment used at the front and rear ends of PCB manufacturing, SMT assembly, and related electronics manufacturing lines. It is mainly used for automatic PCB loading and feeding before processing, as well as automatic PCB unloading, collection, and transfer after processing. The equipment is typically composed of a frame, conveyor rail, lifting mechanism, pusher or suction mechanism, magazine or tray carrying unit, sensors, and control system. Depending on the process, it can be connected with solder paste printers, pick-and-place machines, reflow ovens, AOI inspection equipment, exposure machines, cleaning lines, inspection lines, and other equipment. Its core value lies in improving the automation, continuity, and stability of PCB-related production lines, while reducing board surface scratches, misplacement, missed loading, and unstable production rhythm caused by manual handling.

The upstream supply chain mainly includes sheet metal structural parts, aluminum profiles, linear guides and sliders, ball screws, motors, pneumatic components, vacuum suction components, sensors, PLCs, and human-machine interfaces. Downstream

applications mainly include SMT assembly, bare PCB manufacturing, IC substrate manufacturing, and FPC manufacturing. As electronics manufacturing continues to move toward higher efficiency, higher precision, and reduced labor dependence, PCB loader and unloader equipment has gradually evolved from simple auxiliary conveying equipment into automated line-connection equipment. This has raised higher requirements for equipment compatibility, rail-width adjustment accuracy, loading and unloading stability, anti-scratch capability, and linkage with complete production line systems.

United States market for PCB Loader and Unloader Equipment is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for PCB Loader and Unloader Equipment is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
