PCB photosensitive ink refers to the film-forming substance used to transfer the electronic circuit pattern to the PCB board or protect the circuit on the PCB board to prevent it from being etched. It is a kind of PCB ink. PCB ink can be divided into circuit ink, solder mask ink, marking ink and so on according to the purpose. Line ink is mainly used for circuit printing and etching in the PCB board production process, and the function is to transfer the electronic circuit pattern to the PCB board; solder mask ink is mainly used to protect the circuit and play the role of insulation; marking ink is also called character ink, used on single-sided, double-sided and multi-layer boards
