The global PCB Polyurethane Conformal Coating market size is predicted to grow from US\$ 175 million in 2025 to US\$ 313 million in 2032; it is expected to grow at a CAGR of 8.3% from 2026 to 2032.

PCB polyurethane conformal coating is a protective polymer coating based on polyurethane or modified polyurethane resin, applied to PCB or PCBA surfaces by spraying, dipping, brushing or selective coating to form a thin insulating film. It is designed to improve circuit reliability under humidity, salt fog, chemical exposure, dust, fungus, thermal shock and abrasion. In 2025, Global PCB Polyurethane Conformal Coating sales are estimated at 8,995 Tons, with an average ex-works price of about 19.85 US\$/kg, and the gross margin range is approximately 35%-50%. The upstream of the PCB polyurethane conformal coating industry chain mainly includes polyurethane resin/modified resin, isocyanate, polyol, solvent, photoinitiator, additives and packaging materials. The midstream is the development, mixing, testing and filling of conformal coating formulations. The downstream mainly targets the fields of automotive electronics, consumer electronics, industrial control, communications, aerospace and other fields.

Demand for PCB polyurethane conformal coatings is mainly driven by the shift of electronics toward higher reliability, miniaturization and harsher operating environments. Automotive electronics and renewable-energy control systems require resistance to humidity, salt spray, oil, chemicals and vibration; industrial controls, power supplies and telecom equipment need long-term insulation and corrosion protection; and the development of selective coating, UV/moisture dual-cure and low-VOC polyurethane systems makes these coatings more suitable for automated mass production.
