Polycrystalline Diamond Cutting Tool is short for PCD cutting tool. Polycrystalline Diamond (PCD) is a synthetic diamond product that is produced by sintering together selected diamond particles with a metal matrix, using sophisticated technology. The diamond and matrix, when sintered together under high temperatures and pressures, creates a PCD tool blank that is high in uniform hardness and is abrasive resistant in all directions. This PCD diamond layer is then bonded to a tungsten carbide substrate, which provides strength and a brazable base to permit bonding to other metals.

The global PCD Cutting Tools market size is projected to grow from US\$ 969 million in 2024 to US\$ 1313 million in 2030; it is expected to grow at a CAGR of 5.2% from 2024 to 2030.
