The global PCD and CVD Drills market size is predicted to grow from US$ 2790 million in 2025 to US$ 4136 million in 2031; it is expected to grow at a CAGR of 6.8% from 2025 to 2031.

PCD (Polycrystalline Diamond) Drills and CVD (Chemical Vapor Deposition) Diamond Drills are advanced cutting tools used for high-precision drilling in hard, abrasive, and non-ferrous materials. These tools are commonly used in industries that require high cutting performance, long tool life, and precision, such as automotive, aerospace, and electronics manufacturing.PCD Drills: Made from synthetic diamond crystals bonded together to form a polycrystalline structure, PCD drills are known for their exceptional hardness, wear resistance, and high thermal conductivity. These drills are most commonly used for drilling non-ferrous materials, such as aluminum, copper, brass, and composites.CVD Diamond Drills: CVD diamond drills are coated with a thin layer of diamond material, which is deposited onto a substrate (often tungsten carbide) through chemical vapor deposition. This coating enhances the hardness, wear resistance, and performance of the drill, especially in demanding applications like machining hardened steels, ceramics, and high-temperature alloys.

United States market for PCD and CVD Drills is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for PCD and CVD Drills is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
