The polycrystalline diamond nozzle is composed of a synthetic polycrystalline diamond core and a jacket (metal or plastic).

The polycrystalline diamond nozzle is composed of a synthetic polycrystalline diamond core and a jacket (metal or plastic). Among them, the nozzle core is the core part of the nozzle, and polycrystalline diamond, as the world's super hard and wear-resistant material, is undoubtedly the best material for the nozzle core. As a result, nozzles made of polycrystalline diamond are extremely wear-resistant and have a long service life. Its service life is 10-20 times that of boron carbide nozzles, 100-200 times that of cemented carbide (tungsten steel) nozzles, and more than 2000 times that of alumina nozzles. It is very cost-effective.
