PCR multi-well plate (PCR plate) is an experimental consumable used for polymerase chain reaction (PCR). It is designed with multiple holes (usually 96-well or 384-well), and each well can accommodate an independent PCR reaction. . This design allows multiple PCR reactions to be performed simultaneously on the same plate, improving experimental throughput and efficiency. PCR multi-well plates are indispensable and important consumables in PCR experiments. Through their multi-well design and high-throughput characteristics, they significantly improve the efficiency and accuracy of experiments. Whether in basic research or clinical applications, PCR multi-well plates play a key role in helping scientists and researchers conduct large-scale genetic analysis and testing. Correct use and selection of appropriate PCR multi-well plates can optimize the effect of PCR experiments and ensure the reliability and repeatability of experimental results.

The global PCR Multiwell Plates market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
