A PCS (Parking and Car Stacking) Tower Parking System is an automated parking system that maximizes the available parking space by vertically stacking vehicles in a tower-like structure. It typically consists of a vertical lift or elevator system that moves cars between different levels. The system allows for efficient and space-saving parking solutions in areas with limited space. With the help of computer-controlled mechanisms, users can easily access their vehicles from predefined parking bays without the need for manually maneuvering or searching for available parking spots. This technology offers convenience, security, and efficient utilization of parking areas.

The global PCS Tower Parking System market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
