The PDC coring drill bit is a high-efficiency drilling tool that combines diamond hard cutting technology with coring function. It uses highly wear-resistant PDC blades as cutting teeth arranged on a matrix or rigid structure, and has excellent cutting efficiency and core preservation capabilities. This type of drill bit is suitable for medium-hard to hard rock formations, especially in situations where high coring rates and drilling efficiency are required. According to different formation conditions and drilling requirements, PDC coring drill bits can be divided into multiple series such as surface enhanced type, composite material type, matrix type and steel body type. Its structure usually includes a high-strength matrix, PDC blades, coring channels and stable guide devices. It has the characteristics of long life, high efficiency, high coring integrity rate, etc., and is gradually replacing traditional carbide coring drill bits.

United States market for PDC Coring Drill Bits is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for PDC Coring Drill Bits is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
