According to our LPI (LP Information) latest study, the global PDH Equipment market size was valued at US\$ 2263.7 million in 2022. With growing demand in downstream market, the PDH Equipment is forecast to a readjusted size of US\$ 3454.4 million by 2029 with a CAGR of 6.2% during review period.

The research report highlights the growth potential of the global PDH Equipment market. PDH Equipment are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of PDH Equipment. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the PDH Equipment market.

The PDH device is the process of dehydrogenating propane to produce propylene. In addition to the main product propylene, there will also be by-product hydrogen resources. This is also one of the devices with the largest by-product hydrogen resources in chemical production.

In 2022, China's propylene industry will add 6.11 million tons/year of new production capacity, a year-on-year increase of 12%. The new production capacity will be mainly based on the PDH process, followed by the steam cracking process. As of 2022, PDH production capacity has surpassed catalytic cracking and coal (methanol) to olefins, becoming the second most mainstream process after steam cracking. It is expected that during the '14th Five-Year Plan' period, domestic propylene production capacity will continue to expand, and production capacity growth will continue the 'lightweight' development route.
