The global PE Layflat Hose market size is predicted to grow from US\$ 394 million in 2025 to US\$ 592 million in 2032; it is expected to grow at a CAGR of 6.0% from 2026 to 2032.

In 2025, global sales of PE Layflat Hoses reached 960 million meters, with an average selling price of US\$0.42 per meter. PE Layflat Hoses are foldable water delivery hoses made from polyethylene material through extrusion molding. They are widely used in agricultural irrigation, landscaping, temporary drainage, and industrial liquid transportation, featuring lightweight, corrosion resistance, wear resistance, and easy storage. The product structure is typically a single-layer or multi-layer composite structure, with reinforcing fiber layers added to improve pressure resistance depending on the pressure rating. Upstream raw materials mainly consist of HDPE or LDPE resin and a small amount of additives; downstream supply is primarily to agricultural growers, agricultural machinery dealers, and engineering construction companies, sold through agricultural input channels and as part of engineering projects. The industry's total capacity is approximately 1.2 billion meters per year, with an average gross profit margin of approximately 22%. Future growth lies in the promotion of water-saving irrigation and the upgrading of high-strength composite materials, while simultaneously expanding application scenarios by combining drip irrigation systems and smart irrigation solutions. With the increasing demand for large-scale agricultural operations and water resource management, market demand is steadily growing, and companies with advantages in large-scale production and distribution channels will gain more business opportunities.
