The global PE-RT market size is predicted to grow from US\$ 928 million in 2025 to US\$ 1199 million in 2031; it is expected to grow at a CAGR of 4.4% from 2025 to 2031.

Polyethylene of raised temperature resistance, short as PE-RT, is an advanced type of polyethylene to add extra performance characteristics such as enhanced strength at high temperatures to the traditional properties of polyethylene. Owing to enhanced mechanical properties at elevated temperature, PE-RT resins can be used in all hot water & heat distribution applications.

The common monomers of polymerization include ethylene, Hexene, and Octene.

The major players in global PE-RT market include Dow Chemical, SK, LG Chem, etc. The top 3 players occupy about 50% shares of the global market. South Korea and North America are main markets, they occupy about 60% of the global market. Ethylene-Hexene is the main type, with a share about 50%. Under-floor and Wall Heating & Cooling is the main application, which holds a share about 70%.
